

ONLINE INVESTIGATION & OPEN SOURCE INTELLIGENCE TRAINING

We learn through teaching.

Intelligence-i1

Why do We need It?

Every incident, activity, event, person or entity now has a presence on the internet, and when related to specific issues, they may require further investigation. Open source intelligence and online investigation provide investigators the ability to gather information using the World Wide Web as a primary source.

While our training focuses on the online training aspect, it also takes into consideration local and physical intelligence gathering or investigative work.

Our training is designed for students from novice level starting out in the OSINT and online investigation sector, to master students who wish to remain current. Our training will benefit investigators, information gatherers, journalists, researchers and recruiters.

One of our primary objectives in our training, is to teach the use of mostly free tools and resources to conduct online research and investigations. This also includes access to our web site which contains a number of tools and a member's forum for further support.

We also cover the investigation and information gathering of data from amongst others, social media, how to use search engines such as Google effectively, trace people, discover hidden information, searching pictures and analyzing them, link analysis connecting events, people or entities together, making use of geolocation imagery and information, building profiles from usernames or email addresses, locating and analyzing documents, online investigation security i.e. protection of the investigator through purpose built investigation machines and using virtual android devices to similar cellular phones.

Once completed, investigators and researchers will be able to support due diligence, intellectual property investigations, background profiling, intelligence gathering, identifying business risks and analysis, operational security, in support of criminal and cybercrime investigations.

We offer

Other Services:

Due Diligence and Verification

Open Source Intelligence
