WORD:

Why do We need It?

Without the internet and computers, we would not be able to conduct business and research, use email or communicate with family or friends, do online banking, follow latest news, social media activity, cell phone and numerous other online activities. The tradeoff of course is, our online activity exposes us to considerable risk to our security and privacy.

“I have nothing to hide” they say! Think again, and if you still feel the same way about your security and privacy, send us your email username and password to securitypriv@protonmail.com that we can read and analyse all your email messages.

We do not really want to read your emails and predict that no one will take up this offer, it does however speak for itself.

Our presentations are aimed to equip the individual user with the knowledge, skills and a set of powerful tools to neutralise these very real risks, not only against themselves but also business or organisational networks they may be required to use in their daily responsibilities.

Presentations are based on an exceptional perspective of cybercrime, security and invasive techniques which fascinate audiences. The PowerPoint part of the presentation is kept to a minimum rather making use of actual live and practical demonstrations. Our team are continuously broadening keynote topics while always updating them with the latest content obtained locally and from around the world.

The Cyber Security and Privacy sessions focus on the numerous ways people with nefarious intentions, commit acts such as stalking, harassment, theft of personal information, fraud and hacking but also explains how they benefit from the data obtained.

PRIVACY

Who is this for:

| | |
|---|---|
| The careful internet user | Corporate employee or Executive |
| Human Resources Management | Government officials |
| Law enforcement personnel | Lawyers and members of the judiciary |
| Investigative journalists, online investigators | Victims of domestic violence and stalking |
